

“IntelliOpt” Aegis go’s one step further!

Aegis uses the IntelliOpt platform on a retrospective basis as an additional safeguard for claims payment recoupment. West has developed an innovative web-based platform, IntelliOpt, which integrates health claim data from multiple administrators and delivers otherwise complex and disjointed healthcare claim information in a visually smart, organized, actionable and real-time dashboard. IntelliOpt capitalizes on West’s 25 years of experience within the payer market, and combines traditionally siloed analytics and services with potential cost savings opportunities.

IntelliOpt is unique from other similar type products in the market. In fact, there are several areas that differentiate IntelliOpt:

- **Finding the Needle in the Haystack**
 - By systematically applying anomaly identification edits across all paid claims IntelliOpt can present only those claims that appear anomalous and at a minimum should be reviewed for payment accuracy as they may have been overpaid.
 - With IntelliOpt the claim anomalies that are identified can be presented through an organized workflow.

- **Providing Actionable Information**
 - The analytics provided on IntelliOpt not only display a clear picture of the fund healthcare spend, but also provide the detailed claim line and procedure information that is needed to make decisions supported by the data.

- **Solution Oriented**
 - IntelliOpt offers the ability to utilize the data to support multiple services. The ability to provide subrogation, member outreach and other services driven by the data can provide opportunity for additional cost savings.

Information displayed on IntelliOpt is driven by utilizing the claim and membership data provided by the fund to us: medical and pharmacy claims data, and membership eligibility data. Once the data has been obtained we can complete the on-boarding process in as little as 60 days.
